He could use double walled tanks, but did not normally. When asked about an early monitoring system, Mr. Smith responded that the tanks were all exposed so there was no need to use one. There was a log on the tanks for waste oil that you have to write when the accumulation started, and when it was pumped out which was usually 7-10 days. Plus people access the room regularly.

Mr. Ciccariello noted that the tanks were so tight that he didn't see how anybody could inspect the side or the rear of them. Mr. Smith responded that the tanks weren't tight up against each other. They were several inches apart.

Regarding the membrane, Mr. McKinley asked if Mr. Smith was making a commitment to use a membrane at the Worcester Street location. Mr. Smith responded that he would make the commitment to use the membrane.

There was no one from the public wishing to comment.

Mr. Hughes moved to continue the hearing pending receipt of Mr. Bois' comments. Seconded by Mr. Stern and unanimously voted.
