**SUBJECT: CONTRACT SECOND EXTENSION
RIGHT OF WAY PRODUCT APPLICATION SERVICES**

In March 2020, the Town of Natick entered into a contract with Northeastern Tree Service, 1000 Pontiac Avenue, Cranston, RI 02920 for right of way product application services. The term of this contract was for one (1) year, with two (2) one (1)-year options for renewal, each individually exercisable at the discretion of the Town. The rate was \$500.00 per mile treated.

On December 16, 2020, the Town, by vote of the Natick Select Board, exercised its first one (1)-year option for renewal.

The current contract was procured and vetted through a very carefully drafted Invitation for Bids, seeking the lowest responsible and responsible bidder under M.G.L. c. 30B. We have reviewed market conditions and have determined that no firm would likely meet the rate received in the 2019-2020 bid. Northeastern Tree has continued to perform extremely well in its current contract with the Town. Given this set of circumstances, as well as Northeastern Tree's beneficial performance, we recommend it to be in the Town's best interest to exercise its second extension of the current contract – for the year beginning on March 30, 2022, and ending on March 29, 2023. Note that this will be the final year available under the present bid. We anticipate bidding a successor contract next year.

Assuming the Select Board is so inclined, renewal may be accomplished by executing the attached draft correspondence to Northeastern Tree. Please advise if you have any questions or require additional information.

EHAP CERTIFICATION

The Occupational Safety and Health Administration (OSHA) requires Arborists working near conductors to be properly trained in electrical hazard recognition and avoidance.

OSHA's Electrical Safety Related Work Practices Standard 1910.331 covers tree workers within 10 feet of any energized electrical conductor during normal tree care operations.

OSHA 1910.331 requires employers to document appropriate electrical hazards training for field employees as of Aug. 6, 1991. EHAP meets those training documentation requirements.

Participation in the EHAP Training Program allows employers to verify, keep record and prove that many of these training requirements are being met.

ANSI Z133.1-2000 is the Tree Care Industries consensus safety standard and is enforced under the general duty clause of OSHA. ANSI Z133.1-2000 section 3.11 electrical hazards states an electrical hazard exists when a worker, tool, tree, or other conductive object is closer than 10 feet from an energized overhead electrical conductor rated 50kv, phase to phase or less, or closer than 10 feet + .4 inch for each kv over 50kv. When an electrical hazard exists, minimum approach distances shall be maintained and only qualified line clearance arborists shall perform the work within the proximity of electrical conductors.

Electrical Hazards Awareness Program (EHAP) is designed to educate and train tree care employees about the hazard of working around energized conductors and to help tree care companies meet OSHA and ANSI Safety Compliance Requirements.

IN HOUSE SAFETY TRAINING & ON-THE-JOB TRAINING

Employees and personnel of North-Eastern Tree Service, Inc., regardless of any previous training or level of expertise, must adhere to our in-house Training Procedures. Our firm is in its thirty-ninth year and third generation of Tree Service in the State of Rhode Island and we have a long-standing mastery of the profession.

The nature of the Industry is such that there is no substitute for "On-the Job" experience, however we require personnel to study manuals of Arboriculture and when prepared sit for the RI State Arborist License Exam. In addition to textbook study, we offer employees access to our in-house Library to familiarize themselves with more specific aspects of Tree Care. Examples of these disciplines would be studying various tree diseases and treatments, tree species identification, isolating insects and other pests that attack trees, viewing climbing and safety videos and learning about equipment maintenance.

True Arboriculture experience is gained by actually doing the work. Before that can occur however, all personnel are first taught safety. In fact, safety is our number one priority. Here at North-Eastern Tree Service, Inc., we have an in-house Safety and Training Coordinator who specializes in conveying all the proper procedures to maintain the highest degree of safety. Personal protection in the form of hard hats, face shields, safety glasses, ear protection, gloves and uniforms are provided and mandated. When in a tree, either through climbing or with the use of a bucket truck, arborists are required to tie-in with a safety rope and harness for a second means of protection. When on the ground, personnel are instructed to follow company signals and warnings for optimum safety. Our crews operate as a highly functioning team, interacting with one another safely and efficiently.

Technique is another important element of our Training Program. We have a well developed and direct means of executing tree service operations. Be it tree trimming, tree removal, stump grinding or simply operating the equipment, we pride ourselves in a tried and true technique that gets the job done as safely and efficiently as possible. We teach climbing procedures, bucket truck operations, rigging and rope techniques, ways of handling obstacles and equipment limitations. We even expose our employees to the highly technical procedure of aerial lift inspections so they may tend to appreciate how involved the equipment maintenance becomes and gain a keen sense of potential problems. We give insight to behavior and growth

IN HOUSE SAFETY TRAINING & ON-THE-JOB TRAINING

patterns of various species of trees, identifying host insects and diseases, and the artistry involved with trimming a tree for beautification. Finally, we approach the field with open eyes, teaching our employees the things that often take place on the side lines. For example, we show how to take down a fence that blocks access to a tree stump, build a wooden ramp to bridge over a stone wall or set up a generator to power lights for work in a storm.

Whether our personnel come to us with experience from other companies or with none whatsoever, they quickly learn our procedures and we often hear they are superior. The true measure, however, is when a person can follow our training procedure and find themselves become a successful Arborist because of it.

STAFFING AND PERSONNEL

There are presently up to ninety people on staff here at North-Eastern Tree Service, Inc. We are a family business with over three generations of expertise. Our employee structure is very integrated – Management works closely with Supervisors who direct Crews, while Office staff and Salespeople coordinate paperwork. It is a true Team Approach which allows us to perform very successfully and our Systematic Methods make our work very orderly for everyone involved.

SCHEDULED HOURS OF OPERATION

The Team here at North-Eastern Tree Service, Inc. typically works a forty-hour week, Monday through Friday. Under special circumstances Saturday work can also be arranged on a time and a half basis at a rate of 50% more. This sometimes occurs to adjust for days of inclement weather, or when presence on a Job Site cannot take place during the week. Our daily routinely begins at 7:30 am and ends at 4:00 pm with a half hour at lunch. We're accustomed to the possibility of working on an Emergency Basis for storm damage, hurricanes etc. Work of this nature is always priced individually.

FEE STRUCTURE

Price structure at North-Eastern Tree Service, Inc. depends on many factors. Because we service Public, Private and Municipal clientele, we have estimated jobs both by an hourly rate and by the job. There are no formulas to consult when issues of trees are concerned. The size, species, proximity, nearby obstacles and what equipment we'd need are just some of the factors our Licensed Arborists consider when pricing work. Our intentions are always to conform to customer needs and job specifications.

INSURANCE

North-Eastern Tree Service, Inc. currently holds all General Liability and Worker's Compensation Insurance in the amount of \$2,000,000.00 (certificate made to order). VEGETATION MANAGEMENT PLAN

INTRODUCTION

The Town of Natick plans to follow an Integrated Vegetation Management (IVM) program to reduce reliance on herbicides. The Town of Natick has never previously developed a Vegetation Management Plan (VMP) and plans to submit this VMP to become compliant with applicable laws. Integrated Vegetation Management for Rights of Way (ROW) maintenance includes multiple techniques to control unwanted vegetation in a manner which considers the sensitivity of the environment and follows best management practices. Natick plans to implement this IMV program for the care and control of 128 miles of public roadway, 140 miles of public sidewalk and three and one half miles of the Cochituate Rail Trail. The implementation of an IVM program will reduce the reliance of herbicides by implementing best management practices to reduce unwanted vegetation and promote a beneficial plant community by cultural control. Herbicide applications will be minimized thorough application timing to maximize efficacy, avoidance of a fixed application schedule and will be applied in a manner to protect non-target organisms and environmentally sensitive areas.

GOALS AND OBJECTIVES

The VMP is written to establish a five-year plan to control vegetation within and along the boundaries of Rights of Way (ROW) within of Natick Massachusetts in compliance with the Massachusetts Rights of Way Management Regulations (333 CMR 11.00).

Vegetation management along and within the boundaries of ROW is necessary to control unwanted vegetation that deteriorates public ways, creates a public nuisance, or creates a condition that obstructs pedestrian or vehicular travel. The objective of this VMP is to assure that the vegetation management practices performed along and within the boundaries of ROW are conducted in a manner consistent with best management practices to reduce the reliance on herbicides. The objective will be met by the Natick Department of Public Works by the use of cultural, mechanical and chemical controls to manage undesirable vegetation in a manner consistent with best management practices which consider environmental sensitivity.

IVM PROTOCOL

This VMP will consist of the following actions.

Monitoring- ROW will be surveyed prior to any action. Monitoring will be conducted by the Department of Public Works Land Facilities and Natural Resources Supervisor.

Maintenance- All roadways within ROW will be cleaned using a street sweeper. Cracked asphalt within ROW will be repaired. Desirable ground cover will be encouraged where appropriate to prevent undesirable target vegetation growth.

Record Keeping- Records of surveyed areas will be kept for future planning and reference purposes. Areas maintained by physical repair, mechanical or chemical control will be recorded by the Department of Public Works.

(IVM PROTOCOL continued)

Control Methods- Vegetation control decisions will depend on site-specific conditions. The selected control decision will consider best management practices and the environmental sensitivity of the site.

IDENTIFICATION OF TARGET VEGETATION

Target Vegetation within and along the boundaries of ROW is vegetation that creates a public health nuisance such as nuisance woody plants, grass and broadleaf weeds, and vegetation which creates a risk condition.

Public Health Nuisance Vegetation

Public health nuisance vegetation includes vegetation that grows within or along the boundaries of ROW which could cause an allergic or other health related problem. Poison Ivy (*Toxicodendron radicans*) is likely the most common public health nuisance vegetation target. This VMP will consider all species with similar risk as Poison Ivy growing within ten feet of the ROW boundary to be target vegetation.

Nuisance Woody Plants, Grass and Broadleaf Weeds

Where appropriate beneficial vegetation should be encouraged and maintained within and along the boundaries of the ROW. Conditions may be encountered where woody plants, grass and broadleaf weeds are found in areas requiring action. These areas include cracks in asphalt, brick, concrete, planting beds and along guidrails. Within this condition, woody plants, grass and broadleaf weeds will become target vegetation when the stem density and height impacts established plants, impedes movement, reduces visibility, or the roots undermine asphalt, brick, concrete or other surface used for pedestrian and/or vehicular travel.

Vegetation Which Creates a Risk Condition

Vegetation creates a risk condition when the vegetation creates a condition of public nuisance, obstructs pedestrian or vehicular travel, obstructs visibility, or reduces to a degree the ability of pedestrians to see vehicles, vehicles to see pedestrians and vehicles to see other vehicles.

METHODS OF VEGETATION MANAGEMENT

ROW vegetation management will consist of three method categories.

Cultural Control

Mulching- Mulching of planting beds and ROW boundaries where appropriate to reduce undesirable vegetation.

Street Sweeping- Street Sweeping with a mechanical street sweeper to remove soils on edges of curbing and roadside berms. This action reduces the likelihood of target vegetation germination and establishment.

Crack Sealing- Crack sealing will be performed when possible to limit target vegetation growth by filling in cracks with sealer.

(Methods of Vegetation Management continued)

Mechanical Control

Selective Trimming- Selective trimming consists of mechanical pruning of woody plant material that may obstruct, hinder, or incommode travelers within the ROW.

Hand Cutting- Hand cutting consists of mechanical cutting of targeted woody plant material as close to the ground as practical. Hand cutting is used to protect environmentally sensitive sites or non-target vegetation.

Hand Pulling- Hand pulling consists of pulling targeted grass and broadleaf weeds by hand.

Mowing- Mowing consists of the use of mechanical cutting of target vegetation using machines such as a power trimmer, push mower, riding mower or other similar equipment.

Chemical Control

Herbicide Application- Herbicide application consists of using herbicides where and when such use is most appropriate according to applicable law and this VMP. Herbicide applications will be made in accordance with applicable law and by following the manufacturer label.

Cut Stem- The cut stem process consists of cutting target vegetation immediately followed by an herbicide application. Herbicide applications will be made in accordance with applicable law and by following the manufacturer label.

SUMMARY OF APPLICATIONS AND CONTROL METHODS

Target	Techniques	Comments
Poison Ivy	Herbicide Application	May be growing within 10 feet of ROW. Application will be excluded within no spray zones and sensitive areas
Grass and Broadleaf Weeds	Mulching	Preventative measures for planting beds
	Mowing	In most cases
	Hand pulling	When warranted
	Herbicide Application	Spot treatment of grass growing along guidetrails or in cracks where mowing or cutting is not practical or safe
Low Growth	Mulching	Woodchips as a preventative measure along ROW boundary
	Mowing	In most cases, option for sensitive areas
	Herbicide Application	When and where appropriate
	Hand Cutting	Terrain prevents mowing and re-sprouting is not a concern, option for sensitive areas
Tall Growth	Selective trimming	For risk conditions
	Hand cutting	For risk conditions
	Cut stem treatment	For species less than 12 feet in height that are capable of re-sprouting

JUSTIFICATION FOR HERBICIDE USE

The objective of vegetation management within and along the boundaries of ROW is to prevent or reduce defects that obstruct, hinder or incommode travelers within the ROW. Mechanical cutting and mowing of most conditions will achieve the objective, however, there are conditions that will require action by herbicide application.

Public Health Nuisance Vegetation

The control of public health nuisance vegetation within and along the ROW is a key objective of this IVM plan. Due to the low growing nature of some plants and stoloniferous growth habits, such as poison ivy, cultivation, hand pulling or mowing are not effective. Herbicide applications will be made in accordance with applicable laws, this VMP and manufacturer label.

Nuisance Woody Plants, Grass and Broadleaf Weeds

At times factors such as growth habit, terrain and location of target vegetation may require herbicide applications. Herbicide applications will be made in accordance with applicable laws, this VMP and manufacturer label.

Vegetation Which Creates a Risk Condition

At times factors such as growth habit, terrain and location of target vegetation may require herbicide applications. Herbicide applications will be made in accordance with applicable laws, this VMP and manufacturer label.

Readily identifiable in the field areas will be treated, identified and when appropriate, marked according to all applicable restrictions listed in 333 CMR 11.00. Not readily identifiable in the field areas will likewise be treated and marked when appropriate, but they are identified by the use of data marked on maps and collected in the Yearly Operational Plan and notification processes before the time of treatment.

The individuals assigned the task of identifying and treating sensitive areas in the field will use the appropriate sources and methods from the following list.

- Massachusetts Department of Environmental Protection (DEP) Watershed Maps delineate the perimeter of public watersheds and the location of public wells.
- Massachusetts DEP Wetland Conservancy Maps
- Municipal maps and records, Board of Health, Conservation Commission, and Natick Water Department Mapping

- U.S. Fish and Wildlife Service National Wetlands Inventory Maps, available from the University of Massachusetts, Cartographic Information Research Services, Amherst

The following is a description of how the sensitive areas will be identified for required protection.

- Consult the appropriate reference materials and sources to determine the location of such areas
- Place the boundaries of these sensitive areas on U.S. Geological Survey (USGS) topographical maps
- Prior to herbicide application the applicator will be provided the topographical map with sensitive areas for flagging boundaries
- Sensitive area boundaries and/or the boundaries of the appropriate buffer zone will be flagged prior to herbicide application

The Natick Department of Public Works shall notify the Board of Selectmen, the Board of Health, and the Natick Water Department at least twenty-one days in advance of the application of herbicides to ROW. The notice shall include the approximate date when the application will occur and the application shall occur no later than ten days after approximate date reported. The notice shall also include a copy of the MDAR approved product fact sheet for the active ingredient, name or names of applicators, or the name of the company contracted to conduct the application.

Linear spot treatment of ROW will be posted with an 8.5" by 11" caution sign with a white background and red lettering. The signs will include the date of application, name of product applied, product Environmental Protection Agency (EPA) registration number, and the phone number of the Natick Department of Public Works. Signs will be posted in the most visible locations by staking, attaching to posts, or other similar means. Signs shall be posted twenty-four hours before and after application and no less than every 200 feet along the treated ROW.

Remedial Plan/Spills and Related Incidents

All mixing and loading will be performed in a manner consistent with the manufacturer label and best management practices in a location to protect sensitive areas.

In the event of an incident such as a spill, immediate action will be taken to contain the spill and protect the surrounding area. The cause of the spill must be identified and secured. Spill containment should include covering the spill with adsorptive clay or other similar material. For larger spills clay or soil dikes should be built to impede spill progress. Until the spill is completely cleaned, protection of the spill area should include barriers, flagging, or stationed crew members. If a fire occurs, care shall be taken to avoid breathing fumes.

(Operational Guidelines for Applicators and Herbicide Use continued)

Clean up of minor spills may be accomplished by soaking up the spill with adsorptive clay or other material and placing the material in a leak proof container for proper disposal. All contaminated soil should be placed in leak proof containers, removed from site and disposed of properly. Any minor spill will be reported to the Pesticide Bureau within twenty-four hours.

Major spills are defined by the Department of Environmental Protection (DEP) as reportable quantities of a hazardous material that are managed by 333 CMR. Any major spill should be evaluated under the reporting requirements of the Massachusetts Contingency Plan (MCP) 310 CMR 40.00. Major spills should be handled in the same manner as minor spills. More equipment and materials may be needed for cleanup and certain notifications are required. If the spill is too large for the application crew to clean up, then, after containment and site protection is secured, a hazardous waste cleanup company should be contacted immediately and directed to the site. The Natick Department of Public Works, MDAR (as per 333 CMR 10.15 (4) Record Keeping Requirements), DEP, and any other persons or agency required by applicable law will be notified.

INTEGRATED VEGETATION MANAGEMENT AND OTHER TECHNIQUES AND PROGRAMS TO MINIMIZE AMOUNT AND FREQUENCY OF HERBICIDE APPLICATIONS

Monitoring

All ROW will be scouted prior to any action or herbicide application. Monitoring will be performed by the Natick Department of Public Works, Supervisor of Land Facilities and Natural Resources.

Record Keeping

All maintenance practices performed by the Natick Department of Public Works or contractor within and along the boundaries of ROW will be recorded and a log of areas surveyed will be kept for future planning and reference. The purpose of this record is to reduce the amount of herbicide used. This record will be kept in addition to the requirements described within Massachusetts General Law Chapter 132B and 333 CMR 11.00.

Encouragement of Desirable Vegetation

Whenever possible the vegetation management actions should be performed in a manner to promote the establishment and growth of desirable vegetation that will not require future herbicide application. When possible desirable species should be planted or re-planted.

Physical Controls

Physical controls used to reduce herbicide use include selective pruning, hand cutting, and mowing

Chemical Controls

Herbicides shall be applied in a manner consistent with best management practices such as the use of low volume back pack sprayers and cut stem techniques. Applications shall follow the manufacturer label.

ALTERNATIVE LAND USE/REASONABLE REQUEST MADE BY INDIVIDUAL

Alternative land use options should be considered if the action meets the objective outlined in this VMP. An example of an alternative land use is a moderately maintained roadside lawn area. An alternative land use option such as a moderately maintained roadside lawn area likely would not require the use of herbicides to achieve the objectives outlined in this VMP.

VEGETATION MANAGEMENT PLAN

INTRODUCTION

The Town of Natick plans to follow an Integrated Vegetation Management (IVM) program to reduce reliance on herbicides. The Town of Natick has never previously developed a Vegetation Management Plan (VMP) and plans to submit this VMP to become compliant with applicable laws. Integrated Vegetation Management for Rights of Way (ROW) maintenance includes multiple techniques to control unwanted vegetation in a manner which considers the sensitivity of the environment and follows best management practices. Natick plans to implement this IVM program for the care and control of 128 miles of public roadway, 140 miles of public sidewalk and three and one half miles of the Cochituate Rail Trail. The implementation of an IVM program will reduce the reliance of herbicides by implementing best management practices to reduce unwanted vegetation and promote a beneficial plant community by cultural control. Herbicide applications will be minimized through application timing to maximize efficacy, avoidance of a fixed application schedule and will be applied in a manner to protect non-target organisms and environmentally sensitive areas.

GOALS AND OBJECTIVES

The VMP is written to establish a five-year plan to control vegetation within and along the boundaries of Rights of Way (ROW) within of Natick Massachusetts in compliance with the Massachusetts Rights of Way Management Regulations (333 CMR 11.00).

Vegetation management along and within the boundaries of ROW is necessary to control unwanted vegetation that deteriorates public ways, creates a public nuisance, or creates a condition that obstructs pedestrian or vehicular travel. The objective of this VMP is to assure that the vegetation management practices performed along and within the boundaries of ROW are conducted in a manner consistent with best management practices to reduce the reliance on herbicides. The objective will be met by the Natick Department of Public Works by the use of cultural, mechanical and chemical controls to manage undesirable vegetation in a manner consistent with best management practices which consider environmental sensitivity.

IVM PROTOCOL

This VMP will consist of the following actions.

Monitoring- ROW will be surveyed prior to any action. Monitoring will be conducted by the Department of Public Works Land Facilities and Natural Resources Supervisor.

Maintenance- All roadways within ROW will be cleaned using a street sweeper. Cracked asphalt within ROW will be repaired. Desirable ground cover will be encouraged where appropriate to prevent undesirable target vegetation growth.

Record Keeping- Records of surveyed areas will be kept for future planning and reference purposes. Areas maintained by physical repair, mechanical or chemical control will be recorded by the Department of Public Works.

(IVM PROTOCOL continued)

Control Methods- Vegetation control decisions will depend on site-specific conditions. The selected control decision will consider best management practices and the environmental sensitivity of the site.

IDENTIFICATION OF TARGET VEGETATION

Target Vegetation within and along the boundaries of ROW is vegetation that creates a public health nuisance such as nuisance woody plants, grass and broadleaf weeds, and vegetation which creates a risk condition.

Public Health Nuisance Vegetation

Public health nuisance vegetation includes vegetation that grows within or along the boundaries of ROW which could cause an allergic or other health related problem. Poison Ivy (*Toxicodendron radicans*) is likely the most common public health nuisance vegetation target. This VMP will consider all species with similar risk as Poison Ivy growing within ten feet of the ROW boundary to be target vegetation.

Nuisance Woody Plants, Grass and Broadleaf Weeds

Where appropriate beneficial vegetation should be encouraged and maintained within and along the boundaries of the ROW. Conditions may be encountered where woody plants, grass and broadleaf weeds are found in areas requiring action. These areas include cracks in asphalt, brick, concrete, planting beds and along guiderails. Within this condition, woody plants, grass and broadleaf weeds will become target vegetation when the stem density and height impacts established plants, impedes movement, reduces visibility, or the roots undermine asphalt, brick, concrete or other surface used for pedestrian and/or vehicular travel.

Vegetation Which Creates a Risk Condition

Vegetation creates a risk condition when the vegetation creates a condition of public nuisance, obstructs pedestrian or vehicular travel, obstructs visibility, or reduces to a degree the ability of pedestrians to see vehicles, vehicles to see pedestrians and vehicles to see other vehicles.

METHODS OF VEGETATION MANAGEMENT

ROW vegetation management will consist of three method categories.

Cultural Control

Mulching- Mulching of planting beds and ROW boundaries where appropriate to reduce undesirable vegetation.

Street Sweeping- Street Sweeping with a mechanical street sweeper to remove soils on edges of curbing and roadside berms. This action reduces the likelihood of target vegetation germination and establishment.

Crack Sealing- Crack sealing will be performed when possible to limit target vegetation growth by filling in cracks with sealer.

(Methods of Vegetation Management continued)

Mechanical Control

Selective Trimming- Selective trimming consists of mechanical pruning of woody plant material that may obstruct, hinder, or incommode travelers within the ROW.

Hand Cutting- Hand cutting consists of mechanical cutting of targeted woody plant material as close to the ground as practical. Hand cutting is used to protect environmentally sensitive sites or non-target vegetation.

Hand Pulling- Hand pulling consists of pulling targeted grass and broadleaf weeds by hand.

Mowing- Mowing consists of the use of mechanical cutting of target vegetation using machines such as a power trimmer, push mower, riding mower or other similar equipment.

Chemical Control

Herbicide Application- Herbicide application consists of using herbicides where and when such use is most appropriate according to applicable law and this VMP. Herbicide applications will be made in accordance with applicable law and by following the manufacturer label.

Cut Stem- The cut stem process consists of cutting target vegetation immediately followed by an herbicide application. Herbicide applications will be made in accordance with applicable law and by following the manufacturer label.

SUMMARY OF APPLICATIONS AND CONTROL METHODS

Target	Techniques	Comments
Poison Ivy	Herbicide Application	May be growing within 10 feet of ROW. Application will be excluded within no spray zones and sensitive areas
Grass and Broadleaf Weeds	Mulching	Preventative measures for planting beds
	Mowing	In most cases
	Hand pulling	When warranted
	Herbicide Application	Spot treatment of grass growing along guidrails or in cracks where mowing or cutting is not practical or safe
Low Growth	Mulching	Woodchips as a preventative measure along ROW boundary
	Mowing	In most cases, option for sensitive areas
	Herbicide Application	When and where appropriate
	Hand Cutting	Terrain prevents mowing and re-sprouting is not a concern, option for sensitive areas
Tall Growth	Selective trimming	For risk conditions
	Hand cutting	For risk conditions
	Cut stem treatment	For species less than 12 feet in height that are capable of re-sprouting

JUSTIFICATION FOR HERBICIDE USE

The objective of vegetation management within and along the boundaries of ROW is to prevent or reduce defects that obstruct, hinder or incommode travelers within the ROW. Mechanical cutting and mowing of most conditions will achieve the objective, however, there are conditions that will require action by herbicide application.

Public Health Nuisance Vegetation

The control of public health nuisance vegetation within and along the ROW is a key objective of this IVM plan. Due to the low growing nature of some plants and stoloniferous growth habits, such as poison ivy, cultivation, hand pulling or mowing are not effective. Herbicide applications will be made in accordance with applicable laws, this VMP and manufacturer label.

Nuisance Woody Plants, Grass and Broadleaf Weeds

At times factors such as growth habit, terrain and location of target vegetation may require herbicide applications. Herbicide applications will be made in accordance with applicable laws, this VMP and manufacturer label.

Vegetation Which Creates a Risk Condition

At times factors such as growth habit, terrain and location of target vegetation may require herbicide applications. Herbicide applications will be made in accordance with applicable laws, this VMP and manufacturer label.

Identification Methods

Identification of Sensitive Areas defined in 333 CMR 11.04

Readily identifiable in the field and Not readily identifiable in the field.

Readily identifiable in the field areas will be treated, identified and when appropriate, marked according to all applicable restrictions listed in 333 CMR 11.00. Not readily identifiable in the field areas will likewise be treated and marked when appropriate, but they are identified by the use of data marked on maps and collected in the Yearly Operational Plan and notification processes before the time of treatment.

The individuals assigned the task of identifying and treating sensitive areas in the field will use the appropriate sources and methods from the following list.

- Massachusetts Department of Environmental Protection (DEP) Watershed Maps delineate the perimeter of public watersheds and the location of public wells.
- Massachusetts DEP Wetland Conservancy Maps
- Municipal maps and records, Board of Health, Conservation Commission, and Natick Water Department Mapping
- Regional Planning Agencies maps and records
- Town of Natick Geographic Information System (GIS)
- A Copy of the Yearly Operation Plan (YOP) and Vegetation Management Plan (VMP)
- Correspondence, meetings, and input within the forty-five day YOP twenty-one day municipal ROW notification letter review and comment periods and the forty-eight hour newspaper notification. (333 CMR 11.06 and 11.07 and Chapter 85 of the Acts of 2000)
- U.S. Fish and Wildlife Service National Wetlands Inventory Maps, available from the University of Massachusetts, Cartographic Information Research Services, Amherst

The following is a description of how the sensitive areas will be identified for required protection.

- Consult the appropriate reference materials and sources to determine the location of such areas
- Place the boundaries of these sensitive areas on U.S. Geological Survey (USGS) topographical maps
- Prior to herbicide application the applicator will be provided the topographical map with sensitive areas for flagging boundaries
- Sensitive area boundaries and/or the boundaries of the appropriate buffer zone will be flagged prior to herbicide application

(Process, References and Sources for Identifying Sensitive Areas and Control Strategies Proposed for Sensitive Areas continued)

Sensitive Areas readily identifiable in the field include surface waters, inhabited areas and agricultural areas. The method utilized to identify these sensitive areas is as follows.

- Consult USGS topographic maps to locate sensitive areas
- Prior to herbicide application the applicator will be provided the topographical map with sensitive areas for flagging boundaries
- Applicator will visually survey the area to be treated for any sensitive areas
- Applicator will locate sensitive areas prior to herbicide application and flag appropriate buffer zone
- Municipal Maps and records, Board of Health, Conservation Commission, and Natick Water Department maps

Sensitive Area Restrictions (333 CMR 11.04)

In any sensitive area

- The minimum labeled rate of herbicide for the appropriate site, targeted pest, and application method shall be applied
- Herbicides shall be applied selectively by low pressure foliar techniques or stem application only or other method approved for use by The Department of Agricultural Resources

APPROVED REGISTERED HERBICIDES FOR USE WITHIN SENSITIVE AREAS WITHIN OR ALONG THE BOUNDARIES OF RIGHTS OF WAYRights of Way Sensitive Area Material List

Herbicide applications within sensitive areas shall comply with the Rights of Way Sensitive Area Material List as published by the Massachusetts Department of Agricultural Resources (MDAR).

OPERATIONAL GUIDELINES FOR APPLICATORS AND HERBICIDE USEMassachusetts Pesticide Control Act and 333 CMR 11.00

All applicators and herbicide applications shall abide by Massachusetts General Law Chapter 132B (Massachusetts Pesticide Control Act) and 333 CMR 11.00.

Manufacturer Label, Best Management Practices, Weather

All herbicide applications shall follow label instructions in a manner consistent with best management practices.

Calibration

Application equipment shall be calibrated in accordance with manufactures recommendation and best management practices. Application equipment shall be calibrated to maintain an operating pressure not to exceed sixty pounds per square inch and nozzles shall be adjusted to exclude drift and avoid run off.

(Operational Guidelines for Applicators and Herbicide Use continued)

Cleaning

Equipment used for the purpose of herbicide application shall be cleaned in an appropriate location which avoids sensitive areas.

Vehicles used in application operations shall be equipped with a bag of absorbent, activated charcoal, leak-proof containers, a broom and a shovel in case of minor spills.

A log of herbicides on vehicle will be kept within the vehicle

Product labels, fact sheets, this VMP, current YOP, and Herbicide Spill Check List will be carried on site by the applicator.

Private Property

In General, the Natick Department of Public Works does not trespass or enter upon land to perform work on private property with the exception of eliminating a Public Nuisance.

Notifications

The Natick Department of Public Works shall notify the Board of Selectmen, the Board of Health, and the Natick Water Department at least twenty-one days in advance of the application of herbicides to ROW. The notice shall include the approximate date when the application will occur and the application shall occur no later than ten days after approximate date reported. The notice shall also include a copy of the MDAR approved product fact sheet for the active ingredient, name or names of applicators, or the name of the company contracted to conduct the application.

Linear spot treatment of ROW will be posted with an 8.5" by 11" caution sign with a white background and red lettering. The signs will include the date of application, name of product applied, product Environmental Protection Agency (EPA) registration number, and the phone number of the Natick Department of Public Works. Signs will be posted in the most visible locations by staking, attaching to posts, or other similar means. Signs shall be posted twenty-four hours before and after application and no less than every 200 feet along the treated ROW.

Remedial Plan/Spills and Related Incidents

All mixing and loading will be performed in a manner consistent with the manufacturer label and best management practices in a location to protect sensitive areas.

In the event of an incident such as a spill, immediate action will be taken to contain the spill and protect the surrounding area. The cause of the spill must be identified and secured. Spill containment should include covering the spill with adsorptive clay or other similar material. For larger spills clay or soil dikes should be built to impede spill progress. Until the spill is completely cleaned, protection of the spill area should include barriers, flagging, or stationed crew members. If a fire occurs, care shall be taken to avoid breathing fumes.

(Operational Guidelines for Applicators and Herbicide Use continued)

Clean up of minor spills may be accomplished by soaking up the spill with adsorptive clay or other material and placing the material in a leak proof container for proper disposal. All contaminated soil should be placed in leak proof containers, removed from site and disposed of properly. Any minor spill will be reported to the Pesticide Bureau within twenty-four hours.

Major spills are defined by the Department of Environmental Protection (DEP) as reportable quantities of a hazardous material that are managed by 333 CMR. Any major spill should be evaluated under the reporting requirements of the Massachusetts Contingency Plan (MCP) 310 CMR 40.00. Major spills should be handled in the same manner as minor spills. More equipment and materials may be needed for cleanup and certain notifications are required. If the spill is too large for the application crew to clean up, then, after containment and site protection is secured, a hazardous waste cleanup company should be contacted immediately and directed to the site. The Natick Department of Public Works, MDAR (as per 333 CMR 10.15 (4) Record Keeping Requirements), DEP, and any other persons or agency required by applicable law will be notified.

INTEGRATED VEGETATION MANAGEMENT AND OTHER TECHNIQUES AND PROGRAMS TO MINIMIZE AMOUNT AND FREQUENCY OF HERBICIDE APPLICATIONS

Monitoring

All ROW will be scouted prior to any action or herbicide application. Monitoring will be performed by the Natick Department of Public Works, Supervisor of Land Facilities and Natural Resources.

Record Keeping

All maintenance practices performed by the Natick Department of Public Works or contractor within and along the boundaries of ROW will be recorded and a log of areas surveyed will be kept for future planning and reference. The purpose of this record is to reduce the amount of herbicide used. This record will be kept in addition to the requirements described within Massachusetts General Law Chapter 132B and 333 CMR 11.00.

Encouragement of Desirable Vegetation

Whenever possible the vegetation management actions should be performed in a manner to promote the establishment and growth of desirable vegetation that will not require future herbicide application. When possible desirable species should be planted or re-planted.

Physical Controls

Physical controls used to reduce herbicide use include selective pruning, hand cutting, and mowing

Chemical Controls

Herbicides shall be applied in a manner consistent with best management practices such as the use of low volume back pack sprayers and cut stem techniques. Applications shall follow the manufacturer label.

ALTERNATIVE LAND USE/REASONABLE REQUEST MADE BY INDIVIDUAL

Alternative land use options should be considered if the action meets the objective outlined in this VMP. An example of an alternative land use is a moderately maintained roadside lawn area. An alternative land use option such as a moderately maintained roadside lawn area likely would not require the use of herbicides to achieve the objectives outlined in this VMP.
